

## Réflexe de Babinski (30s) (2)

Soumis par Stephane Desbrosses

Le réflexe de Babinski chez un bébé de deux semaines et demi.

{seyretpic id=8 align=center}2 and half weeks old When a newborn's foot is stroked on the outside of the sole, the baby will flex the big toe upward while the other toes fan out. The reflex is caused by a lack of myelination in the corticospinal tract in young children.
